

to go back around and go through again, but it's not any kind of a big deal. That should be what we are working for. We should be working and working and working; we shouldn't stop until we basically have the capacity to check every vehicle that crosses our border in a way that doesn't shut commerce down and unduly burden totally innocent people who are just going about their lives.

And I want you to help us when this transportation bill comes up, and I want you to help us when the drug budget comes up to get that kind of structure, because you have got to have more help in trying to cut off the drugs at the source in the first place. And we're going to do our best to give it to you.

The last point I want to make is I believe that our cities can embody the image that I have for America in the 21st century because they are the most diverse places in America. And as we become more diverse, in a funny way we've got to become more united. As we become more diverse, we have to learn to celebrate what's different about ourselves, but we have to hold even tighter to the things that bind us together at the family and the neighborhood and the community level.

We're going to reauthorize the national service program, AmeriCorps, this year. I hope all of you will support because you have really used it a lot. I know General Powell is going to speak to you before you end your conference, and I hope all of you will support what he's doing. That Presidents' Summit on Service in Philadelphia last April was a remarkable thing. The idea that we ought to mobilize hundreds of thousands of volunteers, maybe millions of them, to give every child a safe street to grow up on, a good school to attend, a good health care system so that the child is healthy, a mentor, and the chance to serve—those are five laudable goals.

And if you think about it, in terms of what I just said, about the economy and education and crime—if we have a country in which in every city, across the lines of race, people have an equal chance to work together, to learn together, to serve together, we're going to get along together just fine. You all show that every day. And most of you have a good time doing it. I think it's fun to be a mayor

these days, isn't it? [*Laughter*] I think you're having a good time doing it.

When I think of one America, I think of all the places I've been in all of your communities, where people are living together, learning together, working together, serving together, closing those opportunity gaps, building one country. The best days of this country are ahead of us. All we have to do is to bear down and do more of what you have been doing these last few years.

Thank you, and God bless you all.

NOTE: The President spoke at 9:57 a.m. in the State Dining Room at the White House. In his remarks he referred to Mayor Paul Helmke of Fort Wayne, IN; Mayor Wellington Webb of Denver, CO; Mayor Jim Dailey of Little Rock, AR; and Mayor Thomas Menino of Boston, MA.

Statement on the Japan-United States Civil Aviation Agreement

January 30, 1998

I am pleased that the United States has reached a landmark agreement with Japan that will dramatically increase air service between our countries. This agreement will expand a \$10 billion market that services nearly 12 million passengers and carries well over 1 billion pounds of cargo each year. It will allow more U.S. cities to have direct service to Japan and give U.S. airlines extensive new rights to fly into and beyond Japan. This increased competition means more choices for American business travelers and tourists alike.

Like our agreements on telecommunications and financial services, this aviation agreement reflects my policy of opening the world's markets in areas where American companies are most competitive. In aviation alone, we have already concluded far-reaching agreements with Germany, Canada, and 20 other nations. Along with today's agreement, these pacts are moving international aviation into a 21st* century where consumer needs, not governments, will determine where and how often passenger and cargo planes travel.

*White House correction.

I want to thank Secretaries Albright and Slater and the negotiators at the Departments of State and Transportation for their sustained efforts in reaching this historic agreement.

Proclamation 7066—American Heart Month, 1998

January 30, 1998

*By the President of the United States
of America*

A Proclamation

Fifty years ago, a heart attack meant an end to an active lifestyle, and, for a third of those stricken, it meant death. Thankfully, the past half-century has brought us an array of advances in the prevention and treatment of heart disease. Procedures such as balloon angioplasty and coronary artery bypass grafts, noninvasive diagnostic tests, and drugs that treat high blood pressure and clots and reduce high blood cholesterol have enabled Americans to live longer and healthier lives. Equally important, we have become better educated during the past five decades about heart disease risk factors and how to control them.

This year, two of the groups most responsible for this remarkable progress—the National Heart, Lung, and Blood Institute and the American Heart Association—are celebrating their golden anniversaries. The National Heart, Lung, and Blood Institute, part of the National Institutes of Health, leads the Federal Government's efforts against heart disease by supporting research and education for the public, heart patients, and health care professionals. The American Heart Association plays a crucial role in the fight against heart disease through its research and education programs and its vital network of dedicated volunteers.

Despite the encouraging developments in that fight, we still face many challenges. Heart disease continues to be the leading cause of death in this country, killing more than 700,000 Americans each year. The number of Americans with heart disease or a risk factor for it is staggering. Approximately 58 million have some form of cardiovascular disease, about 50 million have high blood pres-

sure, and about 52 million have high blood cholesterol. Americans are also becoming more overweight and less active—two key factors that increase the risk of heart disease. Most disturbing, for the first time in decades, Americans are losing ground against some cardiovascular diseases. The rate of stroke has risen slightly, the prevalence of heart failure has increased, and the decline in the death rate for those with coronary heart disease has slowed.

Women are particularly hard hit by this disease, in part because public health messages too often have not focused on how this segment of our population can best protect their hearts. The American Heart Association recently discovered that only 8 percent of American women know that heart disease and stroke are the greatest health threats for women, and 90 percent of women polled did not know the most common heart attack signals for women.

For a variety of reasons, including poorer access to preventive health care services, minorities in America have high mortality rates due to heart disease. The American Heart Association reported that, in 1995, cardiovascular disease death rates were about 49 percent greater for African American men than for white men, and about 67 percent higher for African American women than white women. In addition, the prevalence of diabetes—a major risk factor for heart disease—is very high in some of our Native American populations, and Asian Americans have a high mortality rate for stroke.

However, both the National Heart, Lung, and Blood Institute and the American Heart Association have undertaken activities to counter these trends. Both groups have initiated major efforts to better inform women and minorities about the threat of heart disease and the steps that can be taken both to prevent and treat it. These fine organizations also continue their efforts to educate health professionals on improving medical practice in heart health and to inform patients and the public about how to reduce their risk of heart disease. As we celebrate their 50th anniversaries, let us resolve to build on their record of accomplishment. By
